Hackathon Context

The Quran Foundation Hackathon (Ramadan 2026) by Provision Launch offers a \$10,000 prize pool across 7 winners. The core problem: millions reconnect with the Quran during Ramadan but struggle to sustain that connection after. You must build something that makes the relationship lasting — not just a better reader.

Impact	30 pts	Directly solves post-Ramadan disengagement with emotional AI coaching
UX	20 pts	Premium dark-first React Native UI with Framer-Motion-style animations
Technical Execution	20 pts	Quran MCP grounded AI, OAuth2 auth, offline sync, word-level morphology
Innovation	15 pts	"Spiritual OS" paradigm — Quran as life guide, not book to read
API Usage	15 pts	9 endpoints across all Content + User API categories
TOTAL	100 pts	Full score target — every rubric point mapped to a feature

Noor — The Spiritual Operating System

Name origin: "Noor" (نور) is an Arabic word meaning Light, appearing directly in the Quran (Surah An-Nur 24:35). It is universal across all Muslim cultures and instantly communicates the product's soul — illuminating daily life through Quranic guidance.

Core insight: Most teams will build a better Quran reader. Noor builds a **Spiritual Operating System** — the Quran actively responds to your life. Three solutions (Sakeenah + Rabitah + Bayan) are merged into one unified platform targeting three distinct user types simultaneously.

User Type	Pain Point	Noor Solution	Source
Emotional Seeker	Overwhelmed, needs comfort	Crisis Mode + Hyper Nudges	Sakeenah
Social Learner	Loses motivation alone	Micro-Halaqas + Identity Ledger	Rabitah
Knowledge Seeker	Wants depth, not surface reading	Knowledge Graph + Linguistic Dives	Bayan

Feature 01 — Crisis Mode

Origin: Sakeenah · Psychology Hook: Variable Reward

User vents current emotional state via free-text or preset moods (overwhelmed, anxious, grateful, sad). AI performs semantic search via Quran MCP and returns a curated 4-step sequence: Verse of Comfort → Tafsir context → Related Hadith → 2-minute Breathing Dhikr timer.

React Native Implementation

- TextInput with mood presets (ScrollView of mood chips)
- POST to your AI backend with MCP call chain
- Animated sequence reveal (Animated.stagger)
- Lottie animation for the Breathing Dhikr timer
- Audio playback of Quranic recitation via Expo AV

APIs Required

Quran MCP (semantic search)
Tafsir API
Audio API (recitation)
Notes API (save reflections)

Screens

CrisisEntryScreen · CrisisResultScreen · DhikrTimerScreen

Feature 02 — Spiritual Pulse Dashboard

Origin: Sakeenah · Psychology Hook: Goal Gradient Effect

High-end data visualization of spiritual health. Tracks Consistency Velocity (rate of engagement over time) rather than raw page counts. Displays reading heatmaps (GitHub-style), growth rings (Apple Fitness-style), and a 7-day streak timeline.

React Native Implementation

- Victory Native XL for charts and heatmaps
- Custom SVG growth rings via react-native-svg
- Streak logic from User Streak Tracking API
- Reading Sessions API for time-series data
- Goals API for target vs actual tracking

APIs Required

Reading Sessions API
Goals API
Streak Tracking API
Activity API

Screens

DashboardScreen · StreakDetailScreen · GoalsScreen

Feature 03 — Hyper-Contextual Nudges

Origin: Sakeenah · Psychology Hook: Fogg Behavior Model (Prompt)

Instead of generic push notifications, time/context-aware nudges deliver the right verse at the right moment. Work hours → verse on integrity. Late night → verse on gratitude. Post-prayer window → verse on reflection. Each nudge includes a 30-second audio clip.

React Native Implementation

- Expo Notifications for scheduled local notifications
- Time-slot mapping logic (morning/work/night segments)
- Background fetch with Expo BackgroundFetch
- Audio API for short recitation clips
- User preferences screen for nudge frequency

APIs Required

Audio API (recitation clips)
Translation API
Quran MCP (contextual verse selection)

Screens

NudgeSettingsScreen · NudgeDetailScreen

Feature 04 — Verified Reflection Journal

Origin: Sakeenah · Psychology Hook: Endowment Effect

Users write free-form reflections on verses they've read. The AI checks reflections for theological alignment using Quran MCP grounding, then enriches them with 2-3 classical Tafsir insights. Reflections can be posted to Quran

Reflect (via User Reflections API) or kept private.

React Native Implementation

- Rich text input with verse tagging (autocomplete)
- AI alignment check call to backend (Quran MCP chain)
- Tafsir enrichment cards (expandable)
- Notes API for local draft storage
- Post Reflections API for public posting

APIs Required

Notes API
Tafsir API
Quran MCP
Post Reflections API (Quran Reflect)

Screens

JournalScreen · ReflectionWriteScreen · ReflectionDetailScreen

Feature 05 — Micro-Halaqas

Origin: Rabitah · Psychology Hook: Social Proof + Commitment

Users join circles of 5-10 people with a shared Quran journey goal (e.g., "10-Day Surah Kahf"). A visual Group Lantern glows brighter as members maintain streaks. Hitting a 7-day group streak unlocks a rare "Group Insight" — an exclusive scholarly breakdown of a key verse.

React Native Implementation

- Collections API for group management
- Real-time lantern brightness via socket or polling
- FlatList of circle members with streak status
- Push notifications when group streak is at risk
- Streak Tracking API for aggregated group data

APIs Required

Collections API
Streak Tracking API
Activity API
Tafsir API (group insights)

Screens

HalaqaListScreen · HalaqaDetailScreen · LanternScreen · GroupInsightScreen

Feature 06 — Shadow Recitation AI (Tajweed Coach)

Origin: Rabitah · Psychology Hook: Immediate Feedback Loop

User recites a verse into the mic. AI uses word-by-word data from the Content API to highlight Tajweed errors in real-time, coloring each Arabic word green (correct) or red (needs work). Users earn Fluency Points and level up from Novice to Qari.

React Native Implementation

- Expo AV for microphone recording
- Word-by-word API data for Arabic word mapping
- Speech-to-text + phoneme comparison in backend
- Custom Arabic text renderer (RTL, word highlighting)
- Gamification: XP bar, level badges with Animated

APIs Required

Word-by-Word API
Audio API (reference recitations)
Activity API (XP tracking)

Screens

RecitationScreen · TajweedFeedbackScreen · FluentProgressScreen

Feature 07 — Identity Ledger

Origin: Rabitah · Psychology Hook: Commitment & Consistency Bias

A dynamic public (or circle-only) profile showing the user's Quranic Identity — a theme-based badge generated from their engagement patterns. Heavy engagement with justice verses → 'Student of Justice'. Mercy verses → 'Seeker of Compassion'. Reinforces self-image and daily return.

React Native Implementation

- Activity API to compute theme frequency
- Theme clustering algorithm (verse tag analysis)
- Animated badge reveal on identity update
- Share card generation (react-native-view-shot)

- Profile screen with engagement history

APIs Required

Activity API
Reading Sessions API
Quran MCP (theme extraction)

Screens

ProfileScreen · IdentityDetailScreen · ShareCardScreen

Feature 08 — Semantic Knowledge Graph

Origin: Bayan · Psychology Hook: Curated Curiosity

An interactive map of the Quran. Tap a concept like 'Mercy' (Rahmah) and see every connected verse across all 114 Surahs rendered as an explorable node graph. Connections are scholarly (via Quran MCP semantic search), not just keyword-based. Nodes link to verses, Tafsir, and related concepts.

React Native Implementation

- react-native-graph or D3 via WebView for node graph
- Quran MCP semantic search for concept clustering
- Pan/zoom gesture handling (react-native-gesture-handler)
- Verse detail bottom sheet (Gorhom Bottom Sheet)
- Bookmark integration per node

APIs Required

Quran MCP (semantic clustering)
Translation API
Tafsir API
Bookmarks API

Screens

KnowledgeGraphScreen · ConceptDetailScreen · VerseNodeScreen

Feature 09 — Linguistic Deep-Dives

Origin: Bayan · Psychology Hook: IKEA Effect (Effort = Ownership)

When a user taps an unknown Arabic word, a bottom sheet shows: its 3-letter root, meaning, grammatical form, and every other verse in the Quran where that root appears with meaning shifts noted. Users collect roots like digital trading cards, building a personal Arabic vocabulary ledger.

React Native Implementation

- Word morphology from Quran MCP word-level data
- Tappable Arabic word renderer (custom RTL Text)
- Root collection stored in Bookmarks API / AsyncStorage
- Trading card animation (Reanimated 2 flip)
- Root detail bottom sheet with verse cross-references

APIs Required

Quran MCP (morphology)
Translation API
Bookmarks API (root collection)

Screens

WordDetailSheet · RootCollectionScreen · RootVerseListScreen

Feature 10 — Spaced Repetition Bookmarks

Origin: Bayan · Psychology Hook: Spacing Effect (Long-term Memory)

Bookmarked verses aren't just stored — they return as flashcards at scientifically optimal intervals: 1 day, 3 days, 7 days, 14 days. Each review session shows the verse, asks the user to recall its meaning/context, then rates confidence. High confidence pushes the next review further out.

React Native Implementation

- Bookmarks API for verse storage
- SM-2 spaced repetition algorithm in JS
- Flashcard UI with swipe gestures (Reanimated)
- Daily review notification via Expo Notifications
- Progress tracking stored locally + synced via Goals API

APIs Required

Bookmarks API
Translation API
Tafsir API (context)

Goals API (review targets)

Screens

ReviewQueueScreen · FlashcardScreen · ReviewCompleteScreen

Complete Dependency List

Core Framework

Package	Version	Purpose
react-native	0.74+	Core framework
expo	~51	Managed workflow, easiest for hackathon
expo-router	3.x	File-based navigation (recommended)
typescript	5.x	Type safety for API responses

Navigation

Package	Version	Purpose
@react-navigation/native	6.x	Navigation container
@react-navigation/bottom-tabs	6.x	Main tab bar
@react-navigation/stack	6.x	Stack screens inside tabs
@gorhom/bottom-sheet	4.x	Bottom sheets for verse detail

UI & Animation

Package	Version	Purpose
react-native-reanimated	3.x	Smooth 60fps animations (flashcards, streaks)
react-native-gesture-handler	2.x	Swipe gestures for flashcards, graph
react-native-svg	14.x	Growth rings, custom charts
victory-native	40.x	Heatmaps, line charts for dashboard
lottie-react-native	6.x	Breathing Dhikr animations
react-native-view-shot	3.x	Identity share card generation

State & Data

Package	Version	Purpose
zustand	4.x	Lightweight global state management
@tanstack/react-query	5.x	API caching, background refetch
react-native-mmkv	2.x	Fast local storage (streaks, settings)
AsyncStorage	expo	Fallback storage for review intervals

Audio & Media

Package	Version	Purpose
expo-av	14.x	Audio playback for recitations, microphone
expo-speech	12.x	Text-to-speech for verse reading

Notifications & Background

Package	Version	Purpose
expo-notifications	0.28	Local push for nudges, review reminders
expo-background-fetch	12.x	Background nudge scheduling
expo-task-manager	11.x	Required peer for background fetch

Auth & Networking

Package	Version	Purpose
expo-auth-session	5.x	OAuth2/OIDC with PKCE for Quran Foundation
expo-web-browser	12.x	OAuth login browser
axios	1.x	HTTP client with interceptors
@modelcontextprotocol/sdk	latest	Quran MCP client

Dev Tools

Package	Version	Purpose
expo-dev-client	4.x	Custom dev builds

jest	29.x	Unit testing
eslint + prettier	latest	Code quality
flipper	optional	Debugging (network, AsyncStorage)

App Navigation Architecture

File-based routing with expo-router. 5 main tabs, each with nested stack screens.

Home (■■■■)	index, CrisisEntry, CrisisResult, DhikrTimer, NudgeDetail	Crisis Mode + Daily Nudge	MCP, Tafsir, Audio
Dashboard	index, StreakDetail, GoalDetail, VelocityChart	Spiritual Pulse	Sessions, Goals, Streaks
Community	index, HalaqaDetail, Lantern, GroupInsight, ReciteScreen, TajweedFeedback	Halaqas + Tajweed AI	Collections, Word API
Explore	index, KnowledgeGraph, ConceptDetail, WordDetail, RootCollection	Knowledge Graph + Roots	MCP, Morphology
Profile	index, Journal, ReflectionWrite, ReviewQueue, Flashcard, Identity	Journal + Flashcards + Identity	Notes, Bookmarks, Activity

Special Screens (not in tabs)

[OnboardingScreen](#) — Post-Ramadan transition wizard — sets daily time commitment & goals

[AuthScreen](#) — OAuth2 login via Quran Foundation (expo-auth-session)

[SettingsScreen](#) — Nudge frequency, language, translation preference, notifications

[SearchScreen](#) — Full-text search across Quran, Tafsir, and personal notes

All 9 API Endpoints — Usage Map

Quran MCP

Model Context Protocol server giving grounded Quran access. No hallucination risk — AI fetches verified text via structured tool calls.

Used in:

- Crisis Mode semantic search
- Theological alignment check for journal
- Knowledge graph concept clustering
- Word morphology and root analysis

Example call:

```
const client = new McpClient(); await client.connect(transport); const result = await client.callTool("search_quran", { query: userInput });
```

Audio API

Programmatic access to Quran recitations with timestamps. Multiple reciters available.

Used in:

- 30-second nudge audio clips
- Shadow recitation reference audio
- Full verse playback in Crisis Mode

Example call:

```
GET /api/v4/recitations/{recitation_id}/by_ayah/{ayah_key}
```

Tafsir API

Classical scholarly commentary from Ibn Kathir, al-Tabari, al-Qurtubi, al-Sadi and more.

Used in:

- Crisis Mode — Tafsir context step
- Journal theological enrichment
- Group Insights for Halaqas

Example call:

```
GET /api/v4/tafsirs/{tafsir_id}/by_ayah/{ayah_key}
```

Translation API

50+ language translations for global accessibility.

Used in:

- Verse display in user preferred language
- Flashcard back-side meaning
- Nudge notification text

Example call:

```
GET /api/v4/quran/translations/{translation_id}
```

Word-by-Word API

Individual word data including transliteration, translation, and morphology for each word.

Used in:

- Tajweed AI word highlighting
- Linguistic Deep-Dive root dissection
- Arabic word tapping for detail

Example call:

```
GET /api/v4/verses/by_key/{verse_key}?words=true&word_fields=text_uthmani
```

Bookmarks API

User verse bookmarking with full CRUD.

Used in:

- Spaced repetition verse storage
- Root card collection
- Saved verses for flashcards

Example call:

```
POST /api/v4/bookmarks {"verse_key": "2:255", "note": "Ayat al-Kursi"}
```

Collections API

Group verse sets — used for Micro-Halaqa shared journeys.

Used in:

- Halaqa group creation
- Shared journey verse lists
- Group progress tracking

Example call:

```
POST /api/v4/collections {"name": "Surah Kahf 10-Day Journey", "verses": [...]}
```

Streak Tracking API

Daily engagement streak tracking with streak data.

Used in:

- Individual streak display
- Halaqa group streak aggregation
- Loss-aversion streak freeze

Example call:

```
GET /api/v4/streaks/current // Returns: { current_streak, longest_streak, last_read_date }
```

Goals & Activity API

User reading goals and activity history for dashboard velocity calculations.

Used in:

- Daily reading goals
- Consistency velocity chart data
- Review completion tracking

Example call:

```
POST /api/v4/goals {"goal_type": "daily_pages", "target": 5} GET /api/v4/activity/summary
```

Zustand Stores + React Query

authStore

```
user: User | null
accessToken: string | null
login() / logout()
refreshToken()
```

streakStore

```
currentStreak: number
lastReadDate: string
freezesRemaining: number
recordRead()
```

crisisStore

```
mood: string | null
sequence: CrisisSequence | null
isLoading: boolean
triggerCrisis(mood)
```

halaqaStore

```
myCircles: Circle[]
activeCircle: Circle | null
groupLanternBrightness: number
```

reviewStore

```
queue: Verse[]
todayReviews: number
scheduleReview(verseKey, confidence)
```

React Query Keys Convention

```
["verses", verseKey, translationId] ["tafsir", verseKey, tafsirId] ["streak", userId] ["halaqa", circleId, "members"] ["review-queue", userId, todayDate]
```

Offline Strategy

React Query persists cache to MMKV (fast) via custom persistQueryClient. Bookmarks, streaks, and review queue are always available offline. Reads are logged locally and synced when connection restores via optimistic updates.

6 Psychological Hooks — How Noor Creates Stickiness

Variable Reward

→ Feature: Crisis Mode

The sequence of Verse → Tafsir → Hadith → Dhikr is curated differently each time based on emotional state. Users never know exactly what they'll receive — creating curiosity loops identical to slot machine psychology but spiritually grounded.

Goal Gradient Effect

→ Feature: Spiritual Pulse

Humans accelerate effort as they approach a goal. Consistency Velocity visualization shows users how close they are to the next streak milestone. The closer to 7-day or 30-day targets, the more urgent the daily push feels.

Social Proof

→ Feature: Micro-Halaqas

Seeing peers in your circle read creates FOMO. The Group Lantern brightness is a real-time signal of collective engagement — when it dims, each member feels responsible for letting the group down.

Commitment & Consistency

→ Feature: Identity Ledger

Once a user's identity is publicly labeled "Student of Justice", the psychological pressure to maintain that identity is enormous. Cognitive dissonance prevents them from abandoning the app without abandoning their self-image.

IKEA Effect

→ Feature: Linguistic Deep-Dives

Users who invest effort in learning Arabic roots value those roots more. Effort creates ownership. The Root Collection trading card mechanic gamifies this — each card represents personal intellectual investment.

Spacing Effect

→ Feature: Spaced Repetition Bookmarks

Ebbinghaus forgetting curve research: reviewing information at increasing intervals dramatically improves long-term retention. SM-2 algorithm ensures Quranic verses become truly memorized, not just read.

The Hook Onboarding (Critical)

Never show the full Quran on first open. The onboarding has 3 steps: (1) "How much time do you have now that Ramadan is over?" → sets daily commitment. (2) Show ONE verse based on their local time. (3) Choose one goal: Emotional Support, Social Circle, or Deep Learning. This eliminates Choice Overload — the #1 habit killer in Quran apps.

Dark-First Premium Design Language

Color Palette

#1A1612	Dark BG	Primary background
#2D251E	Dark BG2	Cards & surfaces
#C9A84C	Gold	Brand accent, CTAs, highlights
#F0D98A	Gold Light	Headings on dark bg
#8A7D6E	Ink Muted	Subtext on dark bg
#1D9E75	Teal	Success, home tab, crisis
#D85A30	Coral	Energy, dashboard, recitation
#534AB7	Purple	AI, journal, knowledge
#185FA5	Blue	Info, identity, community
#C9A84C	Amber	Linguistic roots, exploration

Typography

Display/Brand: Scheherazade New (Arabic) — Google Fonts, RTL Quran text rendering

UI Headers: IBM Plex Sans — technical, clean, modern, strong in small sizes

Body: IBM Plex Sans Regular 400, 16pt, 1.6 line height

Code/Keys: IBM Plex Mono — for Arabic root keys, verse references

Arabic Verse Text: Scheherazade New 22pt+ with proper kashida rendering

Animation Principles

Element	Animation
Crisis Mode sequence	Staggered fade-in at 300ms intervals per step (Animated.stagger)
Lantern glow	Animated.loop with breathing scale 1.0→1.08→1.0, 2s duration
Streak freeze	Shake animation (Animated.sequence) when streak at risk
Flashcard flip	Reanimated 2 rotateY 0→180 with backface hidden for card back
Knowledge graph	Spring physics for node positioning, gesture-driven pan/zoom
Level up badge	Scale 0→1.2→1.0 bounce with particle burst (Lottie JSON)

Tab transition	Stack.Screen with fade animation, 200ms duration
----------------	--

Grounded AI Architecture

The Quran MCP is the single most important technical differentiator. It prevents AI hallucination on Quranic content — the AI refuses to quote or paraphrase any verse not fetched via verified MCP tool calls. This is your demo's killer moment.

Backend Stack (Node.js)

- [Express.js](#) — REST API gateway between RN app and MCP/Quran APIs
- [@modelcontextprotocol/sdk](#) — MCP client for grounded Quran access
- [OpenAI SDK](#) / [Anthropic SDK](#) — LLM for semantic analysis, mood detection, theme extraction
- [Redis](#) — Cache for frequently accessed verses, rate limit management
- [Supabase](#) — User data persistence, Halaqa groups, journal entries

Crisis Mode AI Chain (Step-by-Step)

Step	Action
1	User submits mood text from React Native app
2	Backend receives POST /api/crisis with { mood: "overwhelmed by exams" }
3	LLM extracts emotional keywords: [overwhelm, patience, exam, anxiety]
4	MCP callTool("search_quran", { query: "patience during difficulty" })
5	MCP returns verified verse array from Quran Foundation
6	LLM selects best verse and fetches Tafsir via Tafsir API
7	LLM finds related Hadith using MCP hadith search tool
8	Backend returns { verse, tafsir, hadith, dhikr: "SubhanAllah x33" }
9	React Native renders 4-step animated sequence to user

The Demo's Killer Moment — Refusal Behavior

In your demo video, ask the AI: "What does the Quran say about cryptocurrency?" The AI should respond: "I can only provide verified Quranic content. No verse directly addresses cryptocurrency — but here are verses about honest dealings and avoiding uncertainty (gharar)." This demonstrates grounding, theological discipline, and technical integrity simultaneously. Most teams' AI will hallucinate a verse. Yours won't. That's the judging moment.

Day-by-Day Build Schedule

Deadline: May 20, 2026. Starting point: Today.

Day 1-2	Phase: Foundation
■ expo init noor --template expo-template-blank-typescript ■ Install all dependencies from Section 04 ■ Set up expo-router file structure with 5 tabs ■ Implement OAuth2 login with expo-auth-session (Quran Foundation) ■ Test API auth flow end-to-end ■ Set up Zustand stores (authStore, streakStore)	
Day 3-4	Phase: Core AI Features
■ Set up Express.js backend on Railway/Render (free tier) ■ Integrate Quran MCP client in backend ■ Build Crisis Mode: mood input → AI chain → 4-step sequence UI ■ Implement Hyper-Contextual Nudges with expo-notifications ■ Test MCP refusal behavior (grounding demonstration)	
Day 5-6	Phase: Dashboard + Social
■ Build Spiritual Pulse Dashboard with Victory Native XL ■ Implement Streak Tracking API integration ■ Build Micro-Halaqas: create/join circles, Collections API ■ Build Group Lantern brightness animation ■ Implement Identity Ledger theme extraction	
Day 7-8	Phase: Depth Features
■ Build Knowledge Graph screen (react-native-graph or D3 WebView) ■ Implement Linguistic Deep-Dives with word-by-word API ■ Build Spaced Repetition Bookmarks with SM-2 algorithm ■ Build Verified Reflection Journal with AI alignment check ■ Connect Tajweed AI coach (mic → backend → word highlighting)	
Day 9	Phase: Polish
■ Smooth all animations (Reanimated 2) ■ Implement dark theme consistently across all screens	

- Add Lottie animations (Dhikr timer, level-up)
- Add Arabic RTL text rendering with Scheherazade New font
- Fix all edge cases and loading states

Day 10**Phase: Demo Prep**

- Record demo video (3-5 minutes)
- Script the MCP refusal moment clearly
- Write submission description emphasizing judging rubric
- Deploy backend to production (Railway)
- Submit on time — do not be late

5-Minute Demo Script

0:00–0:30	Hook	Open with the problem stat: "300M people read the Quran in Ramadan. Most stop by Eid." Cut to Noor app opening screen — one verse, perfectly timed to morning.
0:30–1:30	Crisis Mode	Type "I feel overwhelmed by my exams." Show the 4-step sequence appearing with animation. Verse → Tafsir card → Hadith → Dhikr timer breathing animation. Emotional peak.
1:30–2:15	MCP Grounding	ASK: "What does the Quran say about cryptocurrency?" Show AI response: politely declining to fabricate, offering honest trade verses instead. This is your technical credibility moment.
2:15–3:00	Spiritual Pulse	Show the dashboard: Consistency Velocity heatmap, growth rings, 7-day streak. Demonstrate the visual language of spiritual health.
3:00–3:45	Micro-Halqa	Show a circle of 5 people. One member's lantern contribution. Group streak at risk notification. Explain the social accountability mechanic.
3:45–4:30	Knowledge Graph	Tap "Mercy" — watch the concept map bloom across 114 Surahs. Tap a node, open verse detail. Demonstrate depth without complexity.
4:30–5:00	Close	Show the Identity Ledger badge. "This is not a Quran reader. This is a Spiritual Operating System. Noor — Light for every day after Ramadan."

How Noor Scores 100/100

Impact	30 pts
✓ Crisis Mode directly answers "how do I stay connected after Ramadan" ✓ Hyper-Contextual Nudges make the Quran feel personally responsive ✓ Micro-Halaqas recreate the communal Ramadan spirit year-round ✓ Post-Ramadan Onboarding specifically targets the slump moment	
UX	20 pts
✓ Dark-first premium aesthetic — feels like a \$50/month app ✓ One-verse onboarding eliminates choice overload immediately ✓ Smooth Reanimated 2 animations — 60fps, physically accurate ✓ Arabic RTL text rendered correctly with Scheherazade New font	
Technical Execution	20 pts
✓ Quran MCP integration with verified grounding — no hallucinations ✓ OAuth2/OIDC with PKCE for secure Quran Foundation auth ✓ SM-2 spaced repetition algorithm for scientifically optimal review ✓ Offline-first with React Query persistence and optimistic updates	
Innovation	15 pts
✓ "Spiritual OS" paradigm — Quran as life operating system, not reader ✓ MCP refusal behavior — AI that knows what it does NOT know ✓ Identity Ledger — Quranic identity gamification (nothing like it exists) ✓ Linguistic Root trading card collection — turning grammar into delight	
API Usage	15 pts
✓ 5 Content APIs: Quran MCP, Audio, Tafsir, Translation, Word-by-Word ✓ 4 User APIs: Bookmarks, Collections, Streak Tracking, Goals/Activity ✓ Notes API for journal + Post Reflections API for Quran Reflect ✓ Every API category in the hackathon spec is covered	

Build Noor. Win the hackathon. \$3,000 is the target.
Quran Foundation Hackathon 2026 · Deadline May 20 · React Native + Expo
